

PERMANENT FENCING

FIELD FENCE (HINGE JOINT)

Graduated-mesh livestock fencing in 50m and 100m rolls

Field fence is hinge-joint woven fencing with graduated horizontal spacing — tight at the bottom for small stock, wider at the top — used for cattle, sheep and land boundary fencing. Leeter manufactures hot-dip galvanized field fence with 2.0–3.5mm top and bottom wires and 1.8–2.5mm inner wires in rolls of 50m and 100m.

KEY FEATURES

- Hinge-joint knots flex under animal impact and spring back
- Graduated spacing keeps lambs and calves in without extra netting
- Heavier top and bottom wires take tensioning and terrain stress
- Pairs with our studded T-posts for a complete fence line

APPLICATIONS

- Cattle, sheep and goat pasture fencing
- Land boundary and crop protection
- Deer and wildlife exclusion at taller heights

FREQUENTLY ASKED QUESTIONS

What height field fence do I need for cattle or sheep?

Cattle are typically fenced with 1.0–1.2m field fence; sheep and goats with 0.9–1.1m and tighter bottom spacing; deer exclusion needs 1.8–2.4m. The graduated mesh means one roll handles mixed stock — small openings low, wide openings high.

What is a hinge joint and why does it matter?

The hinge joint wraps each vertical stay around the line wires, forming a pivot that flexes when animals push the fence and returns to shape instead of kinking. It is the standard economical knot for livestock fencing worldwide.
